Join Us to Learn More

Take 10 minutes out of your day to learn how The Periscope Project builds capacity in health care providers to address mental health disorders in pregnant and postpartum women. We'll stay on the line to answer questions after a brief introduction to the program.

A women will see a health care provider an average of 25 times from conception to baby's 1st birthday

The Periscope Project provides education, support and resources to help frontline health care professionals address perinatal mental health disorders by leveraging subspecialty perinatal psychiatry expertise by offering health care professionals real-time tele-consultation.
